

William Ammari

Backend Engineer | Laravel / PHP | SaaS Systems & API Integrations

Damascus, Syria | Relocating to Germany | Open to Backend Engineering roles and remote work

will.ammari007@gmail.com | +963 988 601 978 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Backend Engineer with 2+ years of hands-on experience building production Laravel systems and end-to-end business platforms. Strong in REST APIs, domain modeling, authentication and authorization, billing and payment workflows, queues, webhooks, private file handling, database transactions, concurrency controls, and third-party integrations. Built complete systems across education, OTP messaging, procurement, healthcare operations, and workflow automation, with ownership spanning architecture, database design, implementation, testing, documentation, and deployment readiness.

CORE EXPERTISE

Backend & Architecture: PHP, Laravel 12, REST APIs, Eloquent ORM, Form Requests, API Resources, Policies, service/action layers, Laravel Sanctum

Reliability & Security: DB transactions, row locking, idempotent workflows, rate limiting, scoped authorization, webhook signature verification, private file access

Data & Integrations: MySQL, SQL Server, Redis, queues/jobs, scheduler, webhooks, WhatsApp Cloud API, Firebase, PayPal/Paymera, n8n, third-party APIs

Testing & Delivery: PHPUnit, Laravel Feature Tests, Pint, PHPStan/Larastan, Postman, OpenAPI, Docker, Docker Compose, Nginx, GitHub Actions, GitLab

PROFESSIONAL EXPERIENCE

Backend Developer & AI Integration Engineer | Nobalaa.Co | Damascus, Syria | Mar 2024 - Present

- Own end-to-end backend delivery for production web and mobile systems: requirements translation, data modeling, REST APIs, authentication/authorization, business workflows, integrations, background processing, debugging, documentation, and maintenance.
- Designed and built Holol Academy and Arsltek OTP as full production systems, including complex domain workflows, security-sensitive operations, queue-driven processing, billing/messaging integrations, and deployment-ready operational documentation.
- Implemented production patterns including database transactions and row locking, scoped permissions, webhooks, rate limiting, retries, audit trails, private file workflows, payment state handling, notifications, and external API integrations.

Freelance Backend Developer | Freelance | Damascus, Syria | Jun 2025 - Dec 2025

- Delivered backend APIs for operations and order-management workflows, integrating with existing databases and client-facing processes; tested, documented, and handed off completed services.

Automation Developer | Freelance | Damascus, Syria | Aug 2024 - Jan 2025

- Built n8n, webhook, WhatsApp, and Instagram automation workflows for customer support and purchase-assistance use cases, including AI-assisted reply and integration prototypes.

KEY PRODUCTION SYSTEMS

Holol Academy - Education & Student Operations Platform | *Production / Proprietary* | *Laravel 12, MySQL, queues, scheduler, private storage, PHPUnit*

- Designed and built the bilingual platform end-to-end: public/CMS site, Super Admin/Sub Admin/Student portals, admissions, academic hierarchy and cohort scoping, enrollments, learning materials, assignments, submissions, grading/evaluations, resubmission cycles, notifications, and academic-record exports.
- Structured the application around thin controllers and application Actions/Queries/Services; enforced functional permissions plus Program/Cohort scope, route ownership, transactional writes, row locks, uniqueness constraints, and auditable state transitions.
- Built immutable/versioned submission and evaluation workflows, private UUID-based file storage, SHA-256 metadata, authorized streaming, queued integrity verification, idempotent notification ledgers, paginated/eager-loaded queries, and SQL latest-version scopes.
- Prepared production operations with separate queue workloads, scheduler jobs, strict production checks, backup/restore guidance, smoke tests, deployment steps, and rollback procedures; backed by broad feature/unit coverage across academic, admissions, files, authorization, grading, and submission workflows.

Arsitek OTP - OTP Messaging, Billing & Client Provisioning Platform | *Production / Proprietary* | *Laravel 12, Sanctum, WhatsApp APIs, Firebase, payments, queues*

- Built the platform across client/admin portals and APIs: secure API tokens, OTP request lifecycle, WhatsApp Cloud and alternate gateway dispatch, bulk template messaging, delivery-status webhooks, client provisioning/pairing, usage statistics, notifications, packages, custom plans, and billing.
- Implemented concurrency-safe package/custom-plan usage and payment state transitions with DB transactions and row locks; integrated PayPal, Paymera, and manual payment approval flows with validation and fulfillment guards.
- Hardened security and reliability with Meta X-Hub-Signature-256 HMAC verification, IP allowlists, per-client limits, rate limiting/outbound throttling, queued retry handling, provider failure logging/alerts, and Firebase Cloud Messaging.

SELECTED PUBLIC PROJECTS

ProcurePilot AI - Multi-tenant Procurement SaaS Backend | *Laravel, Sanctum, MySQL, Redis, Docker, FastAPI, PHPUnit* | [GitHub](#)

- Built organization-scoped procurement workflows for requests, quotes, deterministic comparison, approvals, invoices/VAT, vendor scorecards, attachments, audit logs, queued processing, health checks, and an AI microservice boundary; quality pipeline includes CI, static analysis, API docs, and 101 tests / 367 assertions.

KlinikLedger - Clinic Operations Backend | *Laravel 12, REST APIs, MySQL, Docker* | [GitHub](#)

- Built tenant-scoped clinic operations for doctors, patients, appointments/availability, invoices, consents, audit logs, privacy workflows, patient export/anonymization, policies, feature tests, and API documentation.

FlowGuard AI - Workflow Risk Analysis MVP | *Laravel, Blade, REST APIs, rule-based analysis* | [GitHub](#)

- Built configurable workflow risk analysis with deterministic rules, scoring, reports, audit logs, data-flow visualization, and documented product/technical assumptions.

EDUCATION & LANGUAGES

B.Sc. in Computer Engineering - Artificial Intelligence Department | University of Damascus, Syria | 2021 - 2025

Arabic: Native | **English:** B2 | **German:** B1 in progress (ÖSD A1 certified)
